SUMMARY

AI/ML Engineering Student with a strong foundation in Natural Language Processing, Computer Vision, and full-stack web integration. Experienced in building end-to-end AI solutions—from intelligent RAG-based legal assistants to real-time biomedical signal classifiers. Passionate about developing resilient, fault-tolerant systems that solve real-world regional and technical challenges.

TECHNICAL SKILLS

– **Languages:** Python, Java
– **AI, ML & NLP:** PyTorch, Scikit-Learn, Pandas, EEGNet
– **Full-Stack & Web:** React.js, FastAPI, Flask, Tailwind CSS, Streamlit
– **Tools & Platforms:** Git, GitHub, VS Code, OpenCV, MNE-Python, Plotly

ACADEMIC PROJECTS

NyayaMitra: Kannada Legal AI Assistant (Pragmatic Reasoning) *Feb 2026 – Present*

- **Developed a Bilingual Legal AI Assistant:** Built a conversational chatbot using **FastAPI** and **React** to simplify Indian laws for citizens. Engineered an **NLP pipeline** that seamlessly processes pure Kannada, code-mixed 'Kanglish', and voice inputs.
- **Engineered a Zero-Hallucination RAG Pipeline:** Implemented **Retrieval-Augmented Generation** using dense semantic indexing via **ChromaDB** and **LaBSE** to pull verified evidence directly from official legal statutes, ensuring the AI never fabricates advice.

NeuroPulse: EEG Seizure Detection (CHB-MIT + EEGNet) *May 2026*

- **Engineered a Deep Learning Biomedical Pipeline:** Built a robust seizure-detection system for the **CHB-MIT Scalp EEG** dataset using **MNE-Python**. Handled real-world data issues like duplicate channels and applied **60Hz notch filtering** for clean signal processing. Applied a **PyTorch WeightedRandomSampler** to guarantee balanced data batches while training the **EEGNet** model.
- **Deployed a Clinical Dashboard:** Served the trained model via a lightweight **Streamlit** interface. Prevented inference-time data drift by securely saving global scaler statistics and maintaining strict separation between training and validation data.

PostVerify: Copied Post Detector (NLP Plagiarism Tool) *April 2026*

- **Developed a Database-Free NLP Application:** Built a lightweight **Streamlit** tool that flags content as original, paraphrased, or plagiarised by combining **TF-IDF Cosine Similarity** and **Jaccard Similarity** algorithms.
- **Integrated Multi-Modal Input & Visualisation:** Implemented **PyTesseract OCR** to extract text directly from uploaded screenshots, and designed an interactive **Plotly** dashboard featuring adjustable threshold sliders, gauge charts, and colour-coded verdict panels.

EduSense: Smart Classroom Assistance System (Computer Vision) *Sep 2025 – Dec 2025*

- **Engineered a Real-Time Computer Vision Workflow:** Utilised **OpenCV** and the **dlib 68-facial landmark model** to accurately classify student attention states by computing **Head Pose Estimation** and **Eye Aspect Ratio**.
- **Automated Biometric Logging:** Built an asynchronous **Flask** backend that handles multi-angle facial registration and generates duplicate-free, hourly attendance logs directly into structured Excel sheets.

CO-CURRICULAR TECHNICAL ACTIVITIES

- **ACM Prompt Battle 2026:** Competed at the student chapter level, showcasing applied **generative AI**, rapid prototyping, and advanced **prompt engineering** skills.
- **Cybersecurity Hackathon:** Competed in the College Level Hackfest 2025, focusing on **cybersecurity** problem-solving and rapid application development.

EDUCATION

B.E. Artificial Intelligence & Machine Learning | Global Academy of Technology, Bengaluru CGPA: 9.14
